

To whom it may concern,**July 31st, 2024**

It is my pleasure to write this letter of recommendation for Dylan. As his supervisor at Diagnostics Development Hub for 7 months (15 January – 31 July 2024) in the Digital Diagnostics department, I have witnessed how Dylan demonstrated exceptional working aptitude and attitude on our projects, especially during busy working periods. His work is always meticulous, and I found him to be a very reliable person whom I can trust to get work done.

He was heavily involved in the development and deployment of one of our Full-Stack Applications. During this project, he explored areas of improvements in our code bases, and worked with the team to debug and fix issues. Notably, he was able to debug a memory leak issue, and increased the memory efficiency of a memory-heavy feature by sixfold. He also refactored previously tightly-coupled backend components, and setup customised error logging, all of which ensured the continued maintainability and testability of our product.

Besides having relevant full stack web development skills, Dylan has a great aptitude to efficiently pickup new skills and quickly provide impactful changes. Whether it was end-to-end integration testing, setting up test pipelines, or containerization, he quickly grasped what was required of him and contributed to the team in meaningful ways.

In the time that I have supervised him, I found Dylan's pleasant disposition a joy to work with. He has been a valuable addition to our team, and I am certain that he is going to continue to do great and creative things in his future. Dylan has my highest recommendation. Please feel free to contact me with any questions or to discuss my recommendation further.
